FOREWORD

This effort was conducted by the School of Electrical Engineering, Georgia Institute of Technology, under the sponsorship of the Rome Air Development Center Post-Doctoral Program for the Federal Aviation Administration (ARD-350). Mr. C. J. Andrasco of the Federal Aviation Administration was the task project engineer and provided overall technical direction and guidance.

The RADC Post-Doctoral Program is a cooperative venture between RADC and some sixty-five universities eligible to participate in the program. Syracuse University (Department of Electrical and Computer Engineering), Purdue University (School of Electrical Engineering), Georgia Institute of Technology (School of Electrical Engineering), and State University of New York at Buffalo (Department of Electrical Engineering) act as prime contractor schools with other schools participating via sub-contracts with the prime schools. The U.S. Air Force Academy (Department of Electrical Engineering), Air Force Institute of Technology (Department of Electrical Engineering), and the Naval Post Graduate School (Department of Electrical Engineering) also participate in the program.

The Post-Doctoral Program provides an opportunity for faculty at participating universities to spend up to one year full time on exploratory development and problem-solving efforts with the post-doctorals splitting their time between the customer location and their education institutions. The program is totally customer-funded with current projects being undertaken for Rome Air Development Center

(RADC), Space and Missile Systems Organization (SAMSO), Aeronautical Systems Division (ASD), Electronic Systems Division (ESD), Air Force Avionics Laboratory (AFAL), Foreign Technology Division (FTD), Air Force Weapons Laboratory (AFWL), Armament Development and Test Center (ADTC), Air Force Communications Service (AFCS), Aerospace Defense Command (ADC), Hq USAF, Defense Communications Agency (DCA), Navy, Army, Aerospace Medical Division (AMD), and Federal Aviation Administration (FAA).

Further information about the RADC Post-Doctoral Program can be obtained from Jacob Scherer, RADC, tel. AV 587-2543, COMM (315) - 330-2543.

BIOGRAPHY

Gene K. Huddleston is an Instructor in the School of Electrical Engineering, Georgia Institute of Technology. He received the B.E.E. (1964) and M.S.E.E. (1970) degrees from Georgia Tech and is currently a Ph.D. candidate in Electrical Engineering. After serving as a Marine officer, he joined the staff of the Engineering Experiment Station at Georgia Tech as a Research Engineer, performing research in digital and analog instrumentation and microwave engineering areas. He joined the faculty of the School of Electrical Engineering in 1970 where he is engaged in the teaching of interfacing small computers and doing research in radome design, near-field measurements, and lightning protection. His memberships include Phi Eta Sigma, Phi Kappa Phi, and IEEE.

VACUUM TUBE AVAILABILITY ASSESSMENT PROGRAM

Volume II

FAA TUBE/EQUIPMENT LISTS

This report presents alphanumerical lists of vacuum tubes used in FAA equipments. The data are presented in Appendices A and B and are based on original data provided by AMEX Systems Inc. and the FAA Depot.

Appendix A lists the tube types in alphanumerical order, shows the FAA equipments in which each tube type is used, and shows the quantity of each tube required in each equipment. Equipments are separated according to FAA type designation: FA-, CA-, and "other" (e.g., TBC, TV-1, etc.). Appendix A consists of 102 pages numbered A-1 through A-102 and contains 8,053 distinct entries. The primary use of the list is to identify specific pieces of equipment which may be affected by a shortage of a particular tube type.

Appendix B lists FAA equipments in alphanumerical order and identifies the tubes used in each piece of equipment. Quantities required are shown in parentheses. Appendix B consists of 71 pages numbered B-1 through B-71 and is merely a cross-reference list generated from Appendix A. The primary use of the list is to identify all tube types used in a particular piece of equipment.

In determining alphanumeric order, all tube types and equipment types were left-justified so that the left-most number in the designation greatly determines the order. (Spaces and hyphens are transparent.) For example, CA750 appears later in the list in Appendix B than does CA2320 since 7 is greater than 2 (even though 750 is less than 2320). When the quantity used column is zero, this indicates this particular tube is double labeled such as 6AL5/5726 and the tube is only counted under one of the type designations.

The information contained in the tube lists was gathered mainly from the review of equipment instruction manuals. A number of the instruction manuals did not contain information as to modifications that have been made to the equipment. Therefore, the information in the listing may contain some discrepancies. Also some instruction manuals could not be located, resulting in several equipment types not being listed.

Any information as to discrepancies or missing equipment that would increase the accuracy of the listing would be appreciated. Information should be forwarded to Federal Aviation Administration, ARD-350, Washington, D.C. 20590, see Appendix C.

The lists in Appendices A and B represent a culmination of efforts to provide a data base which can be used in making rational decisions concerning the replacement of tube-type equipments when vacuum tube shortages occur.

APPENDIX A
